

HOW SAFE IS YOUR WORK WEAR?

Uniforms can cause contamination. That's why there's BioSmart fabric. It locks chlorine* onto the fabric surface which kills 99% of common bacteria and viruses like Salmonella, E. coli, Staph aureus and hepatitis A. And it keeps working up to 75 washes. BioSmart coats, aprons and towels make the working world a better place. Unless you're bacteria. Then you're dead.

Available through G&K services. *When laundered according to care instructions on an EPA-registered chlorine bleach.
